

IN THE SPECIFICATION

Please insert between paragraphs [00130] and [00131] the following new paragraph:

A system for processing a stored document comprises
a document index input device, to receive an image of a document index;
a marked check box locator, coupled to the document input index device, to identify at least one action set forth in the image and to identify a location on the document index image of at least one indication area having a mark therein, the at least one indication area being associated with at least one document;
a document identifier, coupled to the marked check box locator, to identify the at least one document based on the location of the at least one indication area having the mark therein; and
a document processor, coupled to the document identifier, to perform the at least one action on the at least one document.
